

Public Views and Experience of Policing and Criminal Justice in Essex

Q4 2019/20 Survey Results Presentation v2.3

Section One

Executive Summary

Executive Summary: Quarter 4 (Q4) 2019/20 results

- In Q4, 2019/20, 69% of respondents said the police in their local area do an excellent or good job (main confidence question). This is a significant increase from Q3 (65%) (page 9).
 - Victims are far less likely to agree that police are doing a good or excellent job. This is particularly important as these are people that have recently had contact with Essex Police (page 10).
 - Those who say the police do an excellent job is stable at 18% in Q3 and Q4.
- Confidence in receiving a good service increased significantly to 71% in Q4 (Q3, 67%) (page 25).
 - Victims are least likely by some margin (52% versus 70% of non-victims) to believe they would receive a good service.
- Perceptions of fairness (legitimacy) are a key factor in how confident people feel about the police. Performance remains stable, with Q3 and Q4 2019/20 showing that about 7 in 10 residents feel they would be treated fairly if they made a complaint (page 18).
 - Victims, younger people and BAME respondents are all less likely to feel that they would be treated fairly by the police if they made a complaint (page 19).
- Two thirds (66%) agree that the police understand community issues – a slight increase from 64% in Q3 (page 12). This is the highest level of agreement seen since the survey began (quarterly and annually) and is being driven by a higher percentage of people who strongly agree.
 - Victims and BAME respondents remain less likely to agree that the police understand community issues.

Executive Summary: Quarter 4, 2019/20 results

- Over half (52%) feel that the police are dealing with crime and ASB in their area. This is a significant improvement compared to previous performance (47% in Q3) (page 15).
 - There has been an increase in those who 'strongly agree' comparing the rolling 12 months (14% this year versus 9% last year) (page 15).
- 50% of respondents were satisfied with the level of local policing (47% in Q3) (page 33). This is the highest level of satisfaction recorded since the survey began and a significant increase against previous performance.
 - Victims and BAME remain the least likely by some margin to feel satisfied with the level of local policing (page 34).
- 7 out of 10 residents (70%) feel that the police use their powers of Stop and Search fairly, an increase from 68% in Q3 (page 28).
 - Despite this quarterly improvement, annual figures show a significant fall in those who agree that EP use their Stop and Search Powers fairly.
- After a significant increase in the previous quarter, the proportion of people who feel informed about what the police are doing has remained broadly stable in Q4 (46%). This is the highest level recorded in the quarterly survey to date (page 50).
- Notably, the importance of a regular uniformed presence dropped significantly from 76% Q3 (very important) to 64% Q4 (very important) (page 36).
- Results also show a significant increase against previous performance for those who would speak highly of their local police (page 22)

Executive Summary: concluding points

Findings show confidence in local policing has increased significantly this quarter. Increases have also been seen across a number of key measures, some of which correlate with the recent PAU analysis.

Satisfaction with the level of local policing – along with the percentage of people agreeing that Essex Police are dealing with Crime and ASB in their area – is the highest since the survey began. This is very important given that the recent PAU analysis showed that visibility is important alongside evidence of our actions and outcomes.

Essex Police's understanding of the issues that affect communities is at its highest level this quarter compared to any other quarter and the annual trend is an improving one. This shows that EP is listening and taking action against the issues that matter most to local communities. Again, the recent PAU analysis showed that media and actions focused on outcomes that tackle and display an understanding of local/pertinent issues, is important to increasing confidence and satisfaction.

Demographic analysis continues to show that across most measures, BAME respondents and victims of crime continue to report lower levels of confidence and satisfaction. This indicates that there is still work to do in this space and the four key drivers of confidence are extremely important here (see page 6). Further analysis of these will be available once the PAU have Q4 raw data from SMSR.

Summary of Main Findings: PAU factor analysis

- Focusing our media output into action and outcome-focussed messages appears to drive confidence. These messages need to inform and reassure people that we are here for them and are maintaining order and safety where they live and work.
- Our visibility should be linked to action and outcome. Seeing police officers is important but so is the context (town centres, events, problem areas).
- Customer service is key, particularly managing expectations and keeping our promises. We must provide a consistently good service across the Force.
- Focus on victims – they feel less confident and satisfied, and require greatest reassurance. They are our ultimate endorsement ... and, by the same token, our most damaging critic if we get things wrong!
- Focus on our messages on actions and outcomes, display empathy and provide reassurance, keep our promise and be clear about what we are promising.
- Taking pride in our work and that of our colleagues and being strong advocates.

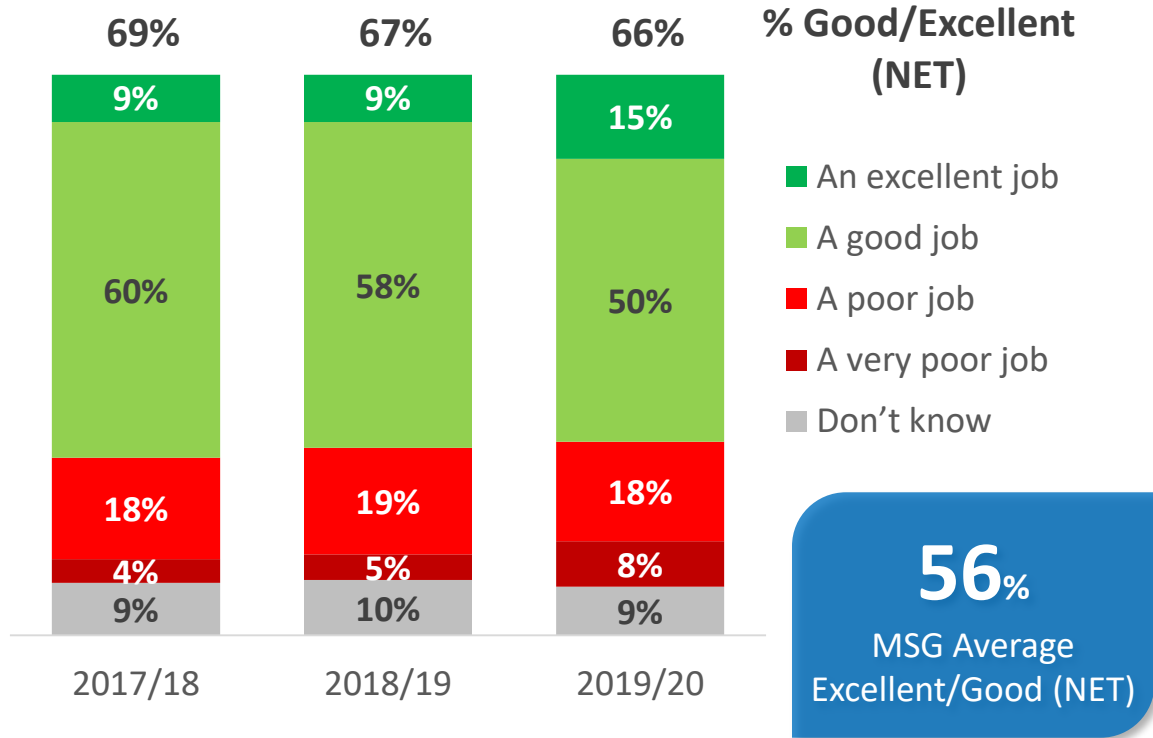

Section Two

Overall Views

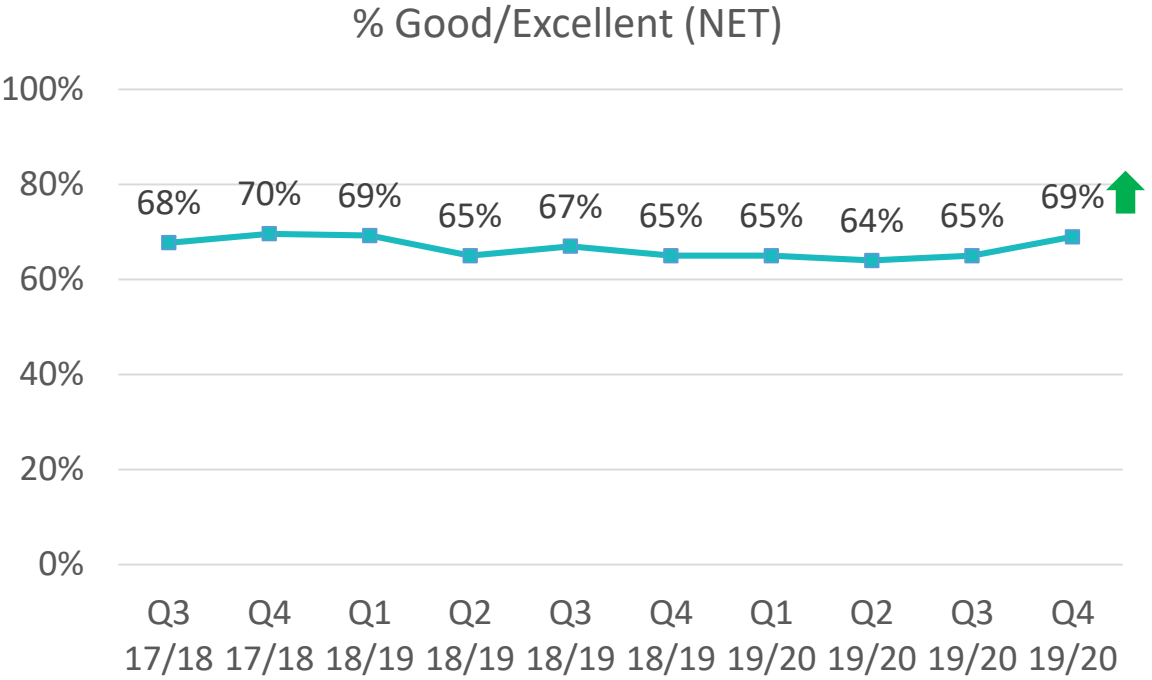

Around two-thirds think the police in their area are doing a good or excellent job

Annual Trend

Quarterly Trend

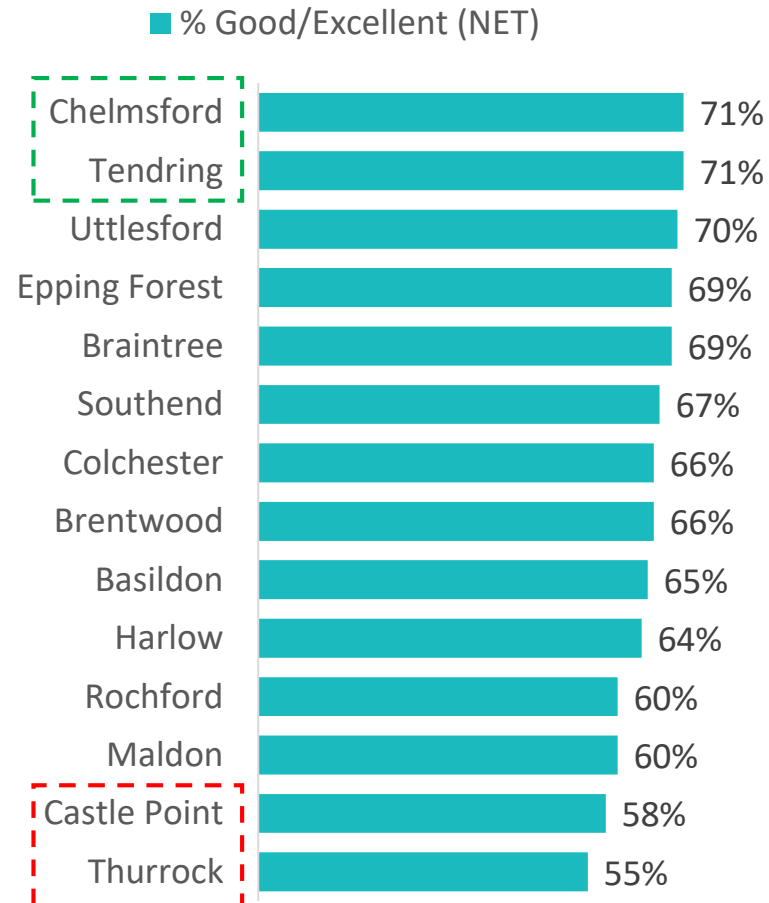

↑ significantly higher than Q4 18/19 – Q3 19/20

NET refers to the combined score for the two most positive answer options (Excellent/Good). Significance testing at 95% confidence level.

Less than 6 out of 10 BAME residents think their local police are doing a good or excellent job

District Comparisons (last 12 months)

Demographic Analysis (last 12 months)

- Over 7 out of 10 Chelmsford and Tendring residents (71%) think the police in their area are doing a good or excellent job, compared to less than 6 out of 10 in Castle Point (58%) and Thurrock (55%)
- Only around half of recent victims of crime (53%) think the police in their area are doing a good or excellent job

Introduction & Methodology

- This report details the eighth quarter of results for the Essex Police Public Perceptions Survey
- Since the survey began 23,138 Essex residents have been interviewed – approx. 1,652 in each of the 14 Districts
- Fieldwork is now split between interviews taking place over the phone and face to face. This methodology helps engage young people. In Q4 19/20 56% of interviews took place over the phone and 44% face-to-face
- Results have been weighted to accurately represent the population size and demographics of each District
- The report presents the results at an annual and quarterly level to compare the performance of Essex Police and highlight significant changes in public perceptions over time
- District and demographic analysis combines the sample from the four quarters over the last 12 months to add greater confidence to the results
- The results are also benchmarked against the National (BMG) and CSEW MSG average where possible
- Future reports will continue to track changes in public perception levels and identify high performing areas and those with need for improvement
